

Landscape Plants for Eastern North America: Exclusive of Florida and the Immediate Gulf Coast, 2nd Edition

Fill[s] a significant void in the literature on ornamental plant usage.... [The book] is a valuable text and reference work for advanced students, professional plantsmen, and landscape architects and is a welcome addition to the literature. --American Society of Horticultural Science This is not only a textbook but a valuable reference work for anyone involved with landscape plants. --American Horticulturalist Here is the definitive one-stop survey of more than 1500 woody ornamental plants and 2500 cultivars of eastern North America for students and professionals in landscape architecture and design, horticulture, and urban forestry. Written by an esteemed authority in the field, this book includes:

- * Greatly expanded coverage of plant species, including significantly increased attention to commercial cultivars
- * Sensible cross-referencing for plant selection based on more than two dozen design criteria, with lists arranged according to such vital factors as size, hardiness, and environmental requirements
- * Hundreds of crisp textural diagrams portraying each primary species at 15 and 40 years in relation to average human height
- * More than 400 photographs depicting plants of exceptional visual interest
- * Maps and graphs, including a full-color map of hardiness zones, offering invaluable visual summaries of major design considerations
- * Succinct explorations of problems and maintenance issues for each species, diminishing the complications of choosing among high- and low-maintenance plants
- * An index listing plants by their scientific and common names

Now in its second edition, this book remains the core reference on landscape design in eastern North America--intelligently organized for maximum planning efficiency. Enhanced with up-to-date coverage of additional shrubs, trees, and their cultivars, as well as expanded listings of plants classified by

characteristics, Landscape Plants for Eastern North America continues to provide all the information necessary for landscape designing in the region. This complete guide provides a concise description of each plant species function, adaptability, seasonal interest, growth rate, common problems, maintenance, cultivars, and related species, along with more than 1000 high-quality scale drawings and hundreds of photographs. And Dr. Flint's book goes beyond many works on landscape plants because of its unique focus on the landscape design process: with cross-referencing in more than two dozen categories based on such design criteria as size, site requirements, and soil prerequisites, readers will easily be able to determine which plants are appropriate to their needs. Throughout the book, a variety of illustrations provide quick reference on a range of important considerations. A full-color map represents the hardiness zones of the eastern region, and bar graphs indicate such adaptability considerations as light, wind, soil moisture, and pH requirements. For each primary species, a seasonal clock furnishes a straightforward visual delineation of the duration and intensity of color throughout the year. Encompassing plant life from herbaceous ground covers to large trees, this is a most comprehensive, easy-to-use resource for anyone involved in landscaping in eastern North America.
