

Neglected Point in Connection with Crises (Reprints of economics classics)

Johannsen developed a view of the economy in terms of circular flows of money and economic activities portrayed in the form of a wheel-of-wealth diagram for which he was perhaps the first to supply a complete statistical underpinning. Johannsen is best known however for having anticipated Keynes saving-investment relationship and the multiplier. This edition includes a new introductory note, N.A.L.J. Johannsen: Amateur Economist, by Joseph Dorfman.
