

Basic Electronics for Tomorrows World

Basic Electronics for Tomorrows World is an intermediate level electronics textbook for students and staff in secondary schools and colleges of further education. The book is organised into sections covering the different topics students are required to study, from safety and concepts to components and digital electronics. Theoretical knowledge is consolidated through a series of practical activities with opportunities for project work and extended assignments. Students are encouraged to develop projects and to work independently in the electronics laboratory. The emphasis throughout is on practical activity and the vocational aspects of electronics.
