

Picking & weaving

Focusing on the people and machines that make it happen, shows how cotton is grown, harvested, processed into fibers, dyed, woven into fabric, and sold for a variety of purposes.

Three primary motions are required in the loom for weaving. Shedding. Picking. Beat up. Shedding is the operation by which the warp is **Weaving process Weaving Technology Knowledge** Introduction: Picking is the 2nd primary motion in weaving. The objectives of picking mechanism are: * To propel the weft carrying element (shuttle, projectile or rapier) along the correct trajectory . If there is a variation in loom speed resulting in a variation in picking force. **NPTEL :: Textile Engineering - Shuttleless Weaving** This allows weaving of fine yarns. Picking Mechanism a. Before Picking (Figure 9.23) Torsion rod 9 is twisted via the cam 8, roller lever 6 and picking shaft 10 till **Primary Motions of Weaving Loom Mechanism Shedding** Indeed this aspect is equally critical for all shuttleless weaving systems.
