

## Cellular Radio: Principles and Design (Macmillan New Electronics)

Part of the Macmillan New Electronics series, this book places equal emphasis on both analog and digital systems, explaining the features common to all existing cellular radio systems, as well as identifying the differences. Discussion of the relative efficiency of different systems in providing effective person-to-person communication is also included. Special emphasis is placed on the importance of radio channels and their attributes. Full details of the connectivity requirements are provided.
