

LARCH: Site Engineering Software for Landscape Architects

LARCH fills the need for a low cost, heavily illustrated, introductory, interactive course book to supplement lectures and technical reference books. It does not assume that the reader is already familiar with the material, as most technical references do, and offers a combination of scope, value, and unique interactivity. LARCH is a media-rich delivery system for all kinds of examples and illustrations of the technical aspects of landscape architecture. From Eratosthenes to Descartes to Robert Manning, from hard-core number-crunching calculations to humorous images of where and how we park our cars, LARCH takes the reader through an interactive exploration of the professions technical side in a way that no regular textbook can possibly do. For Landscape Architects and Architects as reference and for review for professional Licensure examinations. LARCH covers much of the material covered on both the L.A.R.E. and N.C.A.R.B. examinations.
