

# Prices and the Price of Green (Transformations Series on Energy Policy Book 4)

This publication proposes a new approach to energy policy, globally, to permanently dispense with cap and trade and carbon tax. The approach eliminates the need for the Kyoto Protocol and its successors in international energy negotiations and brings policy toward sustainability in energy and into the fold of macroeconomic policy and national and global economic institutions such as the central banks, finance departments, the International Monetary Fund and the World Bank Group.
