

Changes in Western European Banking (European Financial Institutions and Markets Series)

This is a study of the key European banking sectors. The main emphasis of this book is on the current trends and developments, rather than a simple documentation of the status quo. Topics covered include banking strategy and 1992, securities markets and business, and investment banking. The second part of the book is a statistical and country-specific appendix that analyzes the banking systems of 17 European countries.
