

Weaving Lessons For Hand Looms

From the back cover: This is primarily a book for beginners, or those who wish to refresh their knowledge of a firm foundation in the preliminary principles of hand weaving. The authors wrote this book years ago as a guide to their own students and assistants. They give basic information concerning looms and equipment, various processes such as making a warp in four different ways, beaming and threading it, and tying it up in preparation to weaving; how to select a warp, thread a pattern, vary the product, and practical suggestions for the beginner weaver. The authors speak from a wealth of experience, have used meticulous care in setting down the directions and have supplemented the directions with clear illustrations. The book has been a valuable aid to teachers for years and could be used as a text in schools.
