

The Economics of Risk and Insurance

Written for advanced undergraduate and masters level courses, this book builds from a base of asymmetric information issues to discuss a wide array of topics and is illustrated with some timely examples. Covers diverse issues such as risk aversion, expected utility, and moral hazard within the pure theory of insurance. Provides a clear exposition of the necessary mathematics, a feature which cannot be found in readers on the topic. Utilizes an undergraduate economics major level of math. Uses the simplest economic models possible to keep the text intuitive. Introduces more mathematically complex techniques such as basic optimization for students wishing to go further in their analysis.
