

# World Sustainable Development Outlook 2007: Knowledge Management and Sustainable Development in the 21st Century

The World Sustainable Development Outlook series has been developed to provide an overview of sustainable development, to discuss why it is important and to provoke forward thinking on the development of a more coherent approach to solving global problems related to sustainability through science and technology. In doing so, a holistic approach is used to critically examine the interrelationship between the natural, governmental, economic and social dimensions of our world and how science and technology can contribute to solutions.
